

# Recycle - Bot

## Robotics Challenge

### 2018-2019

<b>Level:</b>	Middle School
<b>Type of Contest:</b>	Team
<b>Composition of Teams:</b>	3 to 5 Students per team
<b>Educational Overview:</b>	Recycling has produced great benefits to the environment and has helped reduce the amount waste that is taken to the landfills. Because of this, natural materials can be conserved and what is recycled is then reused and can be made into something new. The arduous course of recycling cannot be solely done by human power, therefore, robots and other machines are needed to assist in the process. Robots are needed to collect recyclable waste and machines then help separate the different recyclable materials such as metal, paper, plastic and glass.
<b>Challenge Objective:</b>	The purpose of this competition requires a team of students to collaboratively design, build, program and test a robot to do various tasks in both autonomous and teleoperation mode and to engineer a sorting device that will separate different sized circular objects. The challenge requires the team to complete three tasks. First task is to locate a bucket randomly placed on the field, second task is to take that bucket to the delivery zone and travel to the trash pit to collect recyclables, and the third task is to take the recyclables collected to the delivery zone so that they can be placed into a sorting device where paper, metal, plastic and glass will be separated.

*The purpose of the competition is to encourage gracious professionalism that leaves everyone involved feeling valued with a sense of integrity and teamwork. The goal is not just to win, but also to participate fairly and to extend the gracious professionalism and respect to all teams and students involved.*

— For Inspiration and Recognition of Science and Technology (FIRST)

#### Definitions:

1. Autonomous: Mode in which the robot moves on its own without human input.
2. Teleoperation: Mode in which robot moves through human control (ie. remote control).
3. Starting Zone: Area where the robot must start at the beginning of each round and after each reset.
4. Trash Pit: Communal area at the center of the field open to other teams where recyclables are located.
5. Sorting Area: Area specifically made to have the sorting device placed on the field.
6. Delivery Zone: Area assigned for robots to deliver the bucket and all collected recyclables.

7. **Recyclable Sorting Device (RSD):** Device used to sort objects such as paper, metal, plastic, and glass which are collected from the center of the field.

### **Robot & Materials:**

1. Teams have the liberty to use any material to construct the robot. Imperial Valley MESA will only provide the LEGO components from the EV3 LEGO MINDSTORM kit and simple recycable materials.  
Robot kit includes: EV3 LEGO MINDSTORM kit (Model #31313)
2. A cell phone or tablet device with either an Android or Apple IOS operating system will be required. We recommend the *RemotEV3* application for Android Operating Systems and for Apple IOS Operating System Robot Commander application, which is also available for Android. The application must be installed prior to the competition in order to remotely operate the robot during teleoperation mode. Electronic devices will NOT be provided by Imperial Valley MESA.
3. Teams may not do any alteration to any of the Lego Kit Parts provided by the Imperial Valley MESA Program
  - a. Alterations include: adhesives on kit parts, holes or modifications to kit parts, and or bending kit parts from the official MESA LEGO Kit.
  - b. NOTE: Robots with alterations will need to be fixed prior to competition. If alterations cannot be undone, then the team will not be allowed to compete.
4. There are no dimensional restrictions as to the building of the robot.
5. Batteries will not be available on the day of the competition.

### **Recyclable Objects:**

Paper: 4.25" x 5.5", 20 lb, Paper. Paper will be crunched into a ball (dimensions will vary once crunched)

Metal: 3/8" Steel-Ball

Plastic: Pony Beads

Glass: 1/2" Shooter Marbles

### **Recyclable Sorting Device (RSD):**

1. For this competition, teams will build a Recyclable Sorting Device (RSD) and will separate the recyclable objects collected by the robot from the center of the field that represent paper, metal, plastic, and glass.
2. The RSD can be made of any materials.
3. Maximum dimensions are length: 40 inches, width: 20 inches, and no height restriction. There are no minimum dimension restrictions.
4. The device must separate all objects into the four different categories; paper, metal, plastic, and glass into four separate containers using .
  - a. The containers will be of the following dimension
    - i. Container: 1 qt. Multi-Mix Container
    - ii. They will be provided by the IV MESA Program.
    - iii. Containers must be adapted to the RSD so that they can be easily attached and removed at anytime, things such as velcro/ rubber bands may be used but no adhesives since multiple teams will be using the containers.
    - iv. Adaptation and containers must be made to fit within the RSD's dimension limitations.
5. Once materials are placed onto the RSD to be filtered, the human player cannot engage the recyclable materials. Human player intervention is only allowed by shaking and/or moving the device to facilitate the movement of the recyclable materials.

### Game Rules:

It is recommended that teams are to program their robot in Competition Mode in order to make the transition of autonomous to teleoperation mode automatically. Therefore, once finishing your robot's autonomous program, you must record the time it takes for it to complete the autonomous task. Once your team has the time recorded, then change the time setting in your program to best suit your robot.

#### **First Task - Autonomous Mode** (Must be completed before being able to move on to the following task.)

1. When the team starts the robot's program at the Judge's signal, it will begin to locate the bucket that is randomly placed on the designated area in the field.
  - a. Points will be awarded for locating the bucket successfully.
  - b. The robot must alert the Judge by emitting a sound and/or making contact and stopping when encountering the bucket.
  - c. The designated area is about 4ft by 6ft.
2. Teams may proceed to teleoperation mode after locating the bucket.

#### **Second Task - Teleoperation Mode**

1. Return bucket to the Delivery Zone.
2. At this point, robots may enter the Trash Pit to collect as many recyclable materials as possible.
  - a. Trash Pit area is about 9ft by 9ft.
3. Once collected, Robot must return to Delivery Area in order to begin sorting.
  - a. The Trash Pit is the only designated area where dragging and pushing is allowed

#### **Third Task - Human Input**

1. Once inside the Delivery Zone, the Human Player has option to grab recyclables from the robot or allow the robot to place them onto the zone.
2. Human player then must collect all items and place them into the sorting device.
3. Process continues until time is up.

*\*Both Second & Third Task will happen simultaneously. It is the team's discretion which to do first.\**

### Competition Logistic Rules:

1. Team Captain is responsible for checking in their robot during the Competition.
  - a. Robots will be impounded after registration and no alteration will be allowed.
2. Each team will have the opportunity to compete in two non-consecutive matches. Each match will be 5 minutes.
3. Robots will complete each match in both autonomous and teleoperation mode.
  - a. Teams must complete the first task in autonomous mode in order to proceed to teleoperation mode.
  - b. If after ONE minute the task has not been completed autonomously, the team can switch to teleoperation but must still complete the first task (with a 50% deduction of the autonomous points) before continuing to the second task.
4. Teams must begin at the Starting Zone and the two front wheels must be behind the green starting line during each match. (See field specifications for details.)
5. Teams will be allowed to reset their robot as many times as needed while on autonomous mode, however, time will continue to run.
  - a. Teams that need to reset must notify the Judge. The robot will then be brought back into the starting zone by the Judge and the team will be able to restart their autonomous program.

- b. Teams will be allowed to reset their robot ONLY during autonomous mode.
6. Robots may NOT block or interfere (purposely) with the other competing robots unless they are in the trash pit.
  - a. Robots that interfere with each other and/or become immobile during autonomous mode will be allowed to reset, however, time will continue to run.
7. Robots that are in teleoperation mode will NOT be allowed to reset unless there is interference by another team's robot that disables a robot ex. turned upside down, cables pulled out. In that case a judge will remove the robot and give it to the team to fix while the time continues to run.
8. During competition, all team members MUST stay in their assigned area at all times.
9. Teams will begin at Judge's signal. Any robot that fails to do so will be considered a false start. A false start will be considered as the following:
  - a. A robot is released or their program starts before the Judge's signal.
  - b. If a false start happens, then all robots will reset and the match will restart.
  - c. Once the vehicle exits the starting zone, the run is considered legitimate.
10. At least two wheels must be on the field at all times.
  - a. Penalty for not adhering to the rule in teleoperation mode will result in automatic return to Starting Zone.
11. Robots must stay within their assigned area at all times and must not enter any other competing robots' area.
  - a. The only interaction that a robot can have with another competing robot is within the Trash Pit.
  - b. Not abiding by this rule will lead your team to disqualification.
12. Teams will be allotted time to practice or make changes to the robot's program or to the robot itself after all teams have completed their first match.
13. Teams will be randomly assigned a field and lane which will be provided the day of competition.
  - a. Teams should assign roles to each teammate. (example: lead engineer, human players, teleoperator, etc.)

### Scoring:

Overall score will consist of the total for the following components:

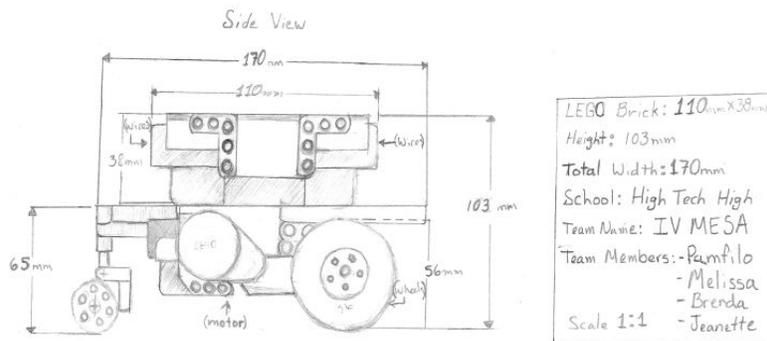

- Scaled Drawing Score
  - Maximum score possible for Scaled Drawings is **10 points**.
- Video Presentation Score
  - Maximum score possible for Video Presentation is **10 points**.
- Total Score for Match 1 and 2
  - During each match, teams will be able to score the following points:
    - Autonomous Mode: **25 points** for successfully completing task
    - Teleoperation Mode: for each recyclable object successfully sorted into its corresponding container the points are as follows:
      - Each recyclable material is worth the following points:
        - 20 Metal **2 points**
        - 20 Glass **1 points**
        - 20 Paper **3 point**
        - 50 Plastic **1 point**

**Scaled Drawing:**

1. A scaled rendering plan must accompany the robot for evaluation. The scaled plans consist of a three-view drawings that include the major dimensions of the robot.
2. Teams must submit scaled drawings of their robots to your Instructional Assistant on Friday January 18th, 2019 by 5:00 p.m.
  - a. No late submissions will be allowed.
3. The maximum score for the drawings is 10 points.
4. The Scaled drawings **MUST** include following:
  - a. Top, side and front view
5. Each scaled drawing sheet **MUST** be labeled with the following to obtain full points:
  - a. Team Name, Team Members' Names, School, Specified 1:1 scale and all measurements
6. Drawings must be done by hand or computer generated. Photocopies of your robot will **NOT** be allowed.

**Example of Scale Drawing Side View:**

**Scaled Drawing Rubric:**

Team Name:	School:
Check all that apply: (each bullet point is worth 1 point maximum)	
Labeling: (2 Points)	
<input type="checkbox"/> Are the top, side, and front View scaled-drawing clearly labeled with the Robot Number, Team's name, Students' Names, and School on each page?	
Rendering: (6 Points)	
<input type="checkbox"/> Top, side and front view scaled-drawings include <ul style="list-style-type: none"> <li><input type="checkbox"/> All of the robot's major measurements and components.</li> <li><input type="checkbox"/> A 1:1 scale key and drawings are at 1:1 scale with present unit measurements.</li> </ul>	
Quality:(2 Points)	
<input type="checkbox"/> Each scaled-drawings pencil or ink mark/smudge free, done with excellent quality and pages kept neatly with few or no wrinkles.	
Total: _____/10 points	

### Application Video Presentation:

The team will be responsible for developing and producing their own video on the educational topic of the competition and their robot. The video must include the following specifications:

1. Video submissions must be done by sharing the video through google drive to the IV MESA email [imperialvalleymesa@gmail.com](mailto:imperialvalleymesa@gmail.com) . Make sure permission is given for viewing of the video through google docs.
  - a. The **due date** is **January 18th, 2019 by 11:59 pm**. No late submissions will be accepted.
  - b. The **email's subject** must state the team's Name and School.
  - c. The **email must state** the team members' names and grades.

Format of the video:

2. The video must be between 60 to 120 seconds long and must be in .MOV or MP4 video format.

The content of the video:

3. The video must contain the following:
  - a. An introductory 5 second segment that displays the team's name, names of members, school, school logo and [MESA Logo](#) (all together at the same time).
  - b. The video **must** explain your team's Engineering Design Process pertaining to this competition through an audio recording **and** visual textual display:
    - i. identify problem
    - ii. explore
    - iii. design/ create
    - iv. try it out
    - v. make it better
6. Artwork or images that are not original or for public use are prohibited unless permission has been granted by the author/s. If permission is granted, it must be stated directly under the image/artwork.
7. The last 5 seconds of the video must **MUST** include proper bibliography for information used in the video presentation. Plagiarism will **NOT** be tolerated and students will receive a "zero" if information is copy pasted.

**Video Rubric:**

Team Name:	School:
<p>Introduction: (Maximum 1 point each)</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> An introductory 5 second segment of 5 seconds</li> <li><input type="checkbox"/> Does the segment displays the team’s name, names of members, school, school logo and <a href="#">MESA Logo</a> (all together at the same time).</li> </ul> <p>___/2 points</p>	
<p>Video Information Content: (Maximum 1 Point each)</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Was problem identified?</li> <li><input type="checkbox"/> Does team demonstrate/ explain how they explored the task?</li> <li><input type="checkbox"/> Were some of the design options shared?</li> <li><input type="checkbox"/> Explain some issues you ran into with your first design when you tried it out.</li> <li><input type="checkbox"/> How did you make it better with your final design?</li> </ul> <p>___/5 points</p>	
<p>Visual Creativity: (Maximum ½ Point each)</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Does the video capture and hold the attention of the observer effectively?</li> <li><input type="checkbox"/> Is the layout of text and images well organized? Is the use of space neat, uncluttered, and very easy to follow?</li> <li><input type="checkbox"/> Does the video have the use of creative visual material? Is the information displayed in a creative way?</li> <li><input type="checkbox"/> Does the team use a variety of methods to display/communicate information ex. Pictures, charts, tables, graphics, recordings, etc.?</li> <li><input type="checkbox"/> Is the audio clear and flows with the content of the video?</li> <li><input type="checkbox"/> Is the bibliography included in the video?</li> </ul> <p>___/3 points</p>	
<p>Total: _____/10 points</p>
